		Response to warmer spring T							
		SCBI		Harvard Forest					
Variable	Definition	RP	DP	RP	DP				
Timing of growth									
$DOY_{25}$	day of year at which 25% of growth is achieved	$\downarrow$	$\downarrow$	$\downarrow$	$\downarrow$				
$DOY_{50}$	day of year at which 50% of growth is achieved	<b>↓</b>	<b>↓</b>	<u> </u>	<b>↓</b>				
$DOY_{75}$	day of year at which 75% of growth is achieved	<b>↓</b>	<b>↓</b>	<b>\</b>	<b>↓</b>				
$DOY_{g_{max}}$	day of year of max growth rate	<b>\</b>	<b>↓</b>	<b>\</b>	<b>\</b>				
$L_{PGS}$	peak growing season length $(DOY_{75} - DOY_{25})$	$\uparrow$	n.s.	$\downarrow$	$\uparrow$				
Daily growth rate									
$g_{max}$	maximum daily growth rate	n.s.	n.s.	$\uparrow$	<b>↓</b>				
Annual growth									
$\Delta DBH$	annual growth	n.s.	n.s.	n.s.	n.s.				
RW	tree ring width	mixed	mixed	n.s.	mixed				

Table 1. Table of hypotheses and associated specific predictions, whether each was supported ('yes'; signficant at p<0.05), rejected ('no'; opposite trend signficant at p<0.05), or found insigificant ('n.s.'; no significant correlation), and display items showing the results. 'RP' and 'DP' refer to ring- and diffuse- porous species, respectively.

Hypotheses and Specific Predictions		DP	RP	DP	Results
Warmer early springs result in earlier stem growth and longer growing seasons					
Day of year at which 25% of growth is achieved $(DOY_{25})$ is negatively correlated with early spring T.	yes	yes	yes	yes	Figs. 3-5
Day of year at which 50% of growth is achieved $(DOY_{50})$ is negatively correlated with early spring T.	yes	yes	yes	yes	Figs. 4-5
Day of year at which 75% of growth is achieved $(DOY_{75})$ is negatively correlated with early spring T.		yes	yes	yes	Figs. 4-5
Day of year of max growth rate $(DOY_{q_{max}})$ is negatively correlated with early spring T.	yes	yes	yes	yes	Fig. 4
Peak growing season length $(L_{PGS} = \overrightarrow{DOY}_{75} - DOY_{25})$ is positively correlated with early spring T.	yes	yes	no	yes	Fig. 4
Maximum growth rates are independent of early spring temperatures. Max growth rate $(g_{max})$ is independent of early spring T.		no (-)	no (+)	no (-)	Fig. 4
Annual stem growth responds positively to warmer spring temperatures.					
Annual growth ( $\Delta DBH$ ; dendrobands) is positively correlated with early spring T.	n.s.	n.s.	yes	no	Fig. 4
On the centennial time scale, tree ring width $(RW)$ is positively correlated with early spring T.	$\mathrm{mixed}^1$	$\mathrm{mixed}^2$	n.s.	$\mathrm{no}^3$	Fig. 6

 $<sup>^1</sup>$  One of nine species analyzed had significant positive response to April  $T_{max}$ ; one had significant negative response to March  $T_{max}$   $^2$  One of two species analyzed had significant positive response to April  $T_{max}$ , both had negative response to May  $T_{max}$   $^3$  One of the two species was negatively correlated with April  $T_{max}$ , and the other positively correlated with May  $T_{max}$ .
